16. A process for isolating a promoter [capable of driving] that drives fruit-specific expression of DNA sequences in non-climacteric fruit comprising
- a) isolating mRNA from ripening blackcurrant fruit[:];
 - b) preparing a cDNA library from the isolated mRNA[:];
 - c) differentially screening the library from b) to identify genes expressed during the ripening period[:]; and
 - d) screening a genomic library with probes prepared from cDNA identified according to step c) to isolate the corresponding gene and its promoter region.
